(a) Prediction vs outcome
live-measured change (%)
twin-predicted change (%)
own decision, n=10
mean |err| 17 pp
live decision, n=19
mean |err| 5 pp
(b) Twin error
|twin − live| (percentage points)
twin's own decision
live decision rehearsed
twin re-run, same inputs
DL throughput
users served
source-cell PRB
(c) Accept/reject
verdict matches live (%)
8/10
14/19
own decision
live decision
(d) QoE steering vs snapshot age
live throughput change (%)
age of the live snapshot (s)
